

PRE-TRANSPLANT INFECTIOUS DISEASE & VIRAL PCR SCREEN

Date: September 10, 2026

Patient Name:	Priya Patel	MRN / Patient ID:	NH-BMT-2026-6631
Age / Gender:	29 Yrs / Female	Blood Group & Rh:	A+ (A Rh Positive)
Clinical Diagnosis:	Relapsed Hodgkin Lymphoma	Referring Consultant:	Dr. Sharat Damodar, MD, DM

Infectious Disease Assay	Quantitative / Qualitative Result	Reference Threshold	Interpretation
Cytomegalovirus (CMV) IgG	POSITIVE (142.4 AU/mL)	< 6.0 AU/mL (Negative)	Latent Past Exposure
Cytomegalovirus (CMV) IgM	NEGATIVE (< 0.2 Index)	< 0.8 Index (Negative)	No Acute Infection
CMV Real-Time DNA PCR	UNDETECTED (< 20 IU/mL)	Undetected / Negative	Zero Active Viremia
Hepatitis B Surface Ag (HBsAg)	NON-REACTIVE	Non-Reactive	Clear
Hepatitis C Antibody (Anti-HCV)	NON-REACTIVE	Non-Reactive	Clear
HIV-1/2 Combo Ag/Ab	NON-REACTIVE	Non-Reactive	Clear

- CLINICAL INTERPRETATION & RECOMMENDATIONS:
- Recipient is CMV Seropositive (R+). No evidence of active cytomegalovirus replication (DNA PCR undetected).
 - Transplant donor matching algorithm prioritizes a CMV-seropositive donor (D+/R+) to transfer cellular memory T-cells.
 - Initiate weekly CMV viral load surveillance via quantitative real-time PCR following conditioning and engraftment.
