

PERIPHERAL BLOOD STEM CELL (PBSC) HARVEST
EVALUATION

Date: September 12, 2026

Patient Name:	Mitesh Sawant	MRN / Patient ID:	TMH - ACTREC - 44821
Age / Gender:	32 Yrs / Male	Blood Group & Rh:	B+ (B Rh Positive)
Clinical Diagnosis:	Acute Myeloid Leukemia (CR1)	Referring Consultant:	Dr. Navin Khattry, MD, DM

Parameter Tested	Observed Value	Target Clinical Threshold	Assessment
PBSC Harvest Volume	285 mL	200 - 350 mL	Adequate Volume
Total Mononuclear Cells (MNC)	8.4 x 10^8 cells/kg	>= 4.0 x 10^8 cells/kg	Optimal MNC Dose
CD34+ Stem Cell Yield	5.8 x 10^6 cells/kg	>= 5.0 x 10^6 cells/kg	Exceeds Target Target
Stem Cell Viability (7-AAD)	95.2%	>= 85.0%	Excellent Viability
Sterility Microbial Culture	Negative (Clear)	Sterile / No Growth	Pass - Cryo Cleared

CLINICAL INTERPRETATION & RECOMMENDATIONS:

- Apheresis performed on Spectra Optia system post G-CSF and Plerixafor mobilization protocol.
- Harvested cell dose of 5.8 x 10^6 viable CD34+ cells/kg is sufficient for robust single/tandem graft reconstitution.
- Cryopreservation approved in 10% DMSO under controlled-rate freezing at -196 deg C in liquid nitrogen vapor phase.
